

Loud & Clear

The new Sundström SR200 full face respirator lets you see clearer and speak louder than any other mask available. Plus, of course, you get Sundström's exceptional protection factor.

Clear,

because the new curved visor minimises glare and brings your face to the front of the mask, giving you a much greater field of vision. Moulded in a single piece for easy cleaning. Other features include a mist-free visor, twin exhalation valves, and a pull-on head harness.

Loud,

because the optional SmallTalk pocket amplifier lets you make your voice heard. Now you're talking! The internal microphone can be attached and disconnected from the SR200 mask **without any intrusive modification**. Also fits the Sundström SR100 half face respirator.

*) ...but sssssss/!!! Don't talk too loud about it: the new Smalltalk hasn't been officially released yet!
