

The SE400 system.

When you choose SE400 for your respiratory protection program, you don't buy just a product: you buy possibilities.

Wherever your workplace, whatever your job, whichever breathing hazards you need to combat, SE400 is designed to safeguard your health with a 2000+ Work Protection Factor.

How? By way of system thinking. The possibilities are boundless.

Dust & gas

SE400 is ideal for all types of industries, whether you're working with asbestos, nuisance dust or toxic gas and vapour.

Germs & viruses

The P3 filter stops all bacteria and viruses down to a size of 0.3 microns.

Chemical & biological

SE400 is used by several defence forces, including the Australian, and carries NATO stock numbers.

Accident & emergency

Fire brigades, police, rescue and emergency teams all use SE400 for supreme protection, excellent mobility, and long usage periods.

Sparks & arcs

For the welder, SE400 is the greatest protection device available. An array of welding shields and spark-proof hoods can easily be fitted.

Neat & clean

In workplaces where hygiene and a pollution-free environment are important (such as the pharmaceutical industry), SE400 is a highly efficient solution.

Noises & voices

SE400 provides efficient voice communication in noisy environments.

Cool & covered

The optional pressurisation valve not only keeps you cool while wearing a protective suit, but also maintains positive pressure in the suit, keeping inward leakage at around 0.5%.
