Adjustable chest strap

SAFETY PRECAUTION

It is recommended that the following precautions be followed for maximum stability of the SE400:

- Individuals must adjust the shoulder straps, chest straps and waist belt to ensure a comfortable fit.
- Waist belt must be used if movements involve the body bending forward. This ensures that the unit does not make contact with the head.
- Adjustable chest strap must not come in contact with the throat.

**Waist Belt Extension (WB-EX)
For larger waist sizes**

If the user's waist size is too large to fit the waist belt of the BP2, the WB-EX waist belt extension can be used. Simply connect the WB-EX to the BP2 and adjust to fit using the BP2 waist belt.
