

FTA-400 FIT TEST ADAPTOR

USER INSTRUCTIONS

The FTA-400 Fit Test Adaptor allows users of SE400 full-face and half-mask respirators to perform facepiece fit tests using a measuring instrument such as the *Portacount* fit tester.

An SE400 facepiece fitted with the FTA-400 Fit Test Adaptor and a particle filter simulates a negative pressure mask, and permits sampling of the air within the breathing space of the facepiece.

1. Disconnect the breathing hose from the SE400 facepiece to be tested.
2. Insert the clear PVC sampling tube of the Fit Test Adaptor into the mask pressure port of the SE400 demand valve (located just above the breathing air inlet) and draw the tube through into the facepiece. If the tube does not pass through easily, try rotating the tube as you insert it.
3. Attach the Fit Test Adaptor to the demand valve in the same way you would attach the SE400 breathing hose, while drawing the PVC tube through. Make sure that the tube is not kinked or crushed.
4. Tuck the sampling tube into the mask to prevent the end of the tube contacting the user's face while the facepiece is being worn.
5. Screw a new particle filter (HE-T or other approved filter) into the Fit Test Adaptor.
6. Connect the sampling tube of the fit testing instrument to the sampling port on the side of the Fit Test Adaptor.
7. Don the facepiece and perform the fit test in accordance with the testing instrument's user instructions.
